

ALL

About

- Get rid of the “enough foreplay” button altogether. We’ll just rely on the button at the bottom
- These will now be full-screen on all formats. We have included navigational cues (arrows) to trigger a scroll. Can these anchor so that for every roll of the mouse, swipe or click of an arrow the frame will animate up/down and lock into the next frame?
- Each of these frames will have slight animations. Animation document is attached.

Info Pop-up

- Don’t cover the header when active

Menu & Header

- Hamburger animation is jumping in Chrome/Firefox/Safari (Mac)
- Remove Partnership filters from menu
- Change “Positions” to “All Positions” in menu - when this is clicked it will reset all filters
- “Cancer Sutra” in header should link to the About page
- “Onward and Underward” button should link to the “All Positions” page (removing all filters)
- Reduce width of active menu about 20% across all formats
- Can we make it so that any click/tap outside of the menu will cause it to close?

DESKTOP

About

- Decrease font size in general 10%
- Center text and force line breaks to mimic comps as closely as possible
- Like the page change animation

Positions

- Center positions within container (some appear to be aligning left?)
- Reduce % of illustration size increase on hover so they don’t overlap other images or extend beyond the screen. We want this to be much more subtle. Give only a hint of a slow zoom.

Info

- Set image max height to 50% of page
- Set image max width to fit area to the left of the text with padding

TABLET

About

- Decrease font size in general 10%
- Knowledge section text is overlapping image

MOBILE

About

- Increase body copy size just a little bit for legibility (the Cancer type body copy size is good)

Positions

- Remove hover state and have first tap open info view

Menu

- Animate menu coming in from left to right like on desktop
